(626) 210-6999 | [hubertyu0862@gmail.com](mailto:hubertyu0862@gmail.com) | El Monte, CA

## Education

### University of California Merced

Aug 2021 - May 2025

*Bachelor of Science, Computer Science and Engineering*

**Coursework:** Software Engineering, Databases, Algorithms, Object Oriented Programming

## Experience

### Software Engineer

Jan 2026 - Present

*Catapult CMS - Contract*

*Roseville, CA*

- Engineered the data ingestion pipeline with React, TypeScript, and Next.js for an AI school chatbot that helps students and faculty navigate school resources and internal documents.
- Built the server side data transformation workflow that normalizes PDF, HTML, and DOC files into AI-readable documents so that the chatbot can accurately answer questions.
- Developed an admin dashboard enabling administrators to configure web crawler settings, trigger crawl jobs, and monitor indexed resources.

### Software Engineering Intern

Jan 2025 - May 2025

*UC Merced Civil Engineering - Internship*

*Merced, CA*

- Developed an interactive web dashboard that transformed complex gridded weather datasets into user-friendly visualizations, enabling civil engineers to make more informed site-specific decisions.
- Implemented the data retrieval backend that queries gridded weather datasets to return wind, snow, and rainfall predictions for any user-selected map location.
- Integrated the Leaflet mapping library to build an interactive map interface that communicates with the backend API to fetch and display weather predictions.

## Projects

### The Voyage

Nov 2025

- Won 1st place at 48 hour CS Girlies November Hackathon with an immersive 3D solar system explorer that gamifies planetary education through interactive data collection.
- Built the exploration experience using TypeScript and React to load a 3D environment with an interactive user interface and audio to enhance immersion ambience.

### Eventura Activity App

Nov 2024 - Dec 2024

- Developed a mobile app in a 2-person team that recommends personalized activities based on dynamic factors like real-time weather conditions and group size.
- Implemented a full-stack architecture using React Native for the mobile frontend, Flask for backend API routing, and SQL for database integration to store and query activity data and user preferences.

## Skills

**Programming Languages:** JavaScript, TypeScript, Python

**Frameworks & Libraries:** React, React Native, Next.js, Flask, Tailwind, Bootstrap, Leaflet, ShadCN UI

**Databases:** PostgreSQL, SQL, Supabase, Firebase, Neon

**Tools & Platforms:** Git, GitHub, Vercel, Upstash, DrizzleORM, Vercel AI SDK
